PRODUCT SPECIFIC WARRANTY

RITE-HITE® warrants the RHH Hydra-Rite™ / Base Dock Leveler for five-years parts and one-year labor from date of shipment in accordance with Rite-Hite's Standard Warranty Policy.

NOTICE TO USER

Your local Rite-Hite® representative provides a Planned Maintenance Program (P.M.P.) which can be fitted to your specific operation. Call your local representative or Rite-Hite® at 414-355-2600.

The Rite-Hite products in this manual are covered by one or more of the following U.S. patents: 5882167, 6065172, 6070283, 6085375, 6092970, 6106212, 6116839, 6190109, 6276016, 6311352, 6318947, 6322310, 6360394, 6368043, 6431819, 6488464, 6524053, 6726432, 6773221, 6832403, 6880301, 7032267, 7062814, 7213285, 7216391, 7363670, 7380305, 7503089, 7533431, 7546655, 7584517, 7681271, 7823239, 7841823, 7877831, 7914042, 8006811, 8065770, 8141189, 8191194, 8286757, 8287223, 8303235, 8307956, 8443474, 8464384, 8464846, 8465245, 8497761, 8499897, 8544130, 8547234, 8590087, 8590673, 8616826, 8657551, 8662535, 8678736, 8690087, 8905198, 9010501, 9096170, 9096397, 9126775, 9139384, 9145273, 9150367, 9174811, 9227799, 9230419 and pending U.S and foreign patent applications. RITE-HITE®, THINMAN™, SAFE-T-LIP®, HYDRACHEK®, WHEEL-LOK™, DOK-LOK®, DUAL-DOK®, SAFE-T-STRUT™, DOK-COMMANDER®, JUMBO®, HYDRA-RITE™, SAFE-T-GATE®, RITE-VU™ LIGHT COMMUNICATION SYSTEM and SMOOTH TRANSITION DOK SYSTEM™, are trademarks of Rite-Hite®.

SAFETY WARNINGS

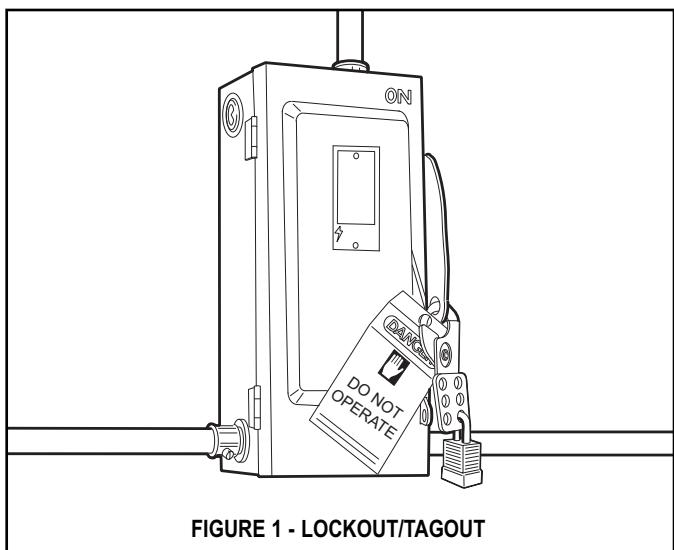

FIGURE 1 - LOCKOUT/TAGOUT

WARNING

When working with electrical or electronic controls, make sure that the power source has been locked out and tagged out according to OSHA regulations and approved local electrical codes.

LOCKOUT/TAGOUT PROCEDURES

The Occupational Safety and Health Administration (OSHA) requires, in addition to posting safety warnings and barricading the work area (including, but not limited to, trucking office and loading docks), that the power supply has been locked in the OFF position or disconnected. It is mandatory that an approved lockout device is utilized. An example of a lockout device is illustrated. The proper lockout procedure requires that the person responsible for the repairs is the only person who has the ability to remove the lockout device.

In addition to the lockout device, it is also a requirement to tag the power control in a manner that will clearly note that repairs are under way and state who is responsible for the lockout condition. Tagout devices have to be constructed and printed so that exposure to weather conditions, or wet and damp locations, will not cause the tag to deteriorate or become unreadable.

RITE-HITE® does not recommend any particular lockout device, but recommends the utilization of an OSHA approved device (refer to OSHA regulation 1910.147). RITE-HITE® also recommends the review and implementation of an entire safety program for the Control of Hazardous Energy (Lockout/Tagout). These regulations are available through OSHA publication 3120.

DANGER

This is the highest level statement. Failure to follow the listed instructions will most likely result in severe injury or death.

CAUTION

The statements used with this level of warning deal with a safe operating procedure. If the procedure is ignored the possibility of personal injury may exist.

WARNING

This is a statement of serious hazard. Failure to follow the listed instructions could place the individual at risk of serious injury or death.

IMPORTANT

IMPORTANT is used to draw attention to a procedure that needs to be followed to prevent machine damage.

OTHER IMPORTANT OPERATIONAL SAFETY WARNINGS

DANGER

Never be under the dock leveler platform or lip without:

- Installing the Safe-T-Strut™ or other supporting device.
- If lip needs to be extended, follow procedures shown under Safety Devices on the following page.
- Turning off power to the control box.
- Locking out and tagging out the main power source, as shown under Safety Warnings on preceding page.

WARNING

Always barricade the dock leveler at ground level and dock level from any form of traffic when maintenance is required.

CAUTION

Inspect the dock leveler monthly to ensure that there are no broken or worn parts which could cause injury to personnel or damage to the equipment.

WARNING

- Before starting installation or maintenance, check and follow the safety procedures of the facility where the dock leveler is being installed.
- Never enter a truck/trailer until its brakes are set, air has been dumped from air ride suspension (if applicable), and you have visually inspected to be sure truck/trailer is securely held in place by a vehicle restraint or wheel chock per OSHA regulations.
- Never operate the leveler with you, anyone, or anything on, or in front of the leveler, or without a truck/trailer parked in position, or from on the truck/trailer bed.
- DO NOT operate with anyone under platform or in front of the lip.
- When leveler is not in use, always store it so that it is supported by the lip supports and that it is level with the surrounding dock floor.
- If a malfunction does occur, always call your authorized RITE-HITE® service representative immediately.

SAFETY DEVICES

DANGER

Never be under the dock leveler platform or lip without:

- Installing the Safe-T-Strut™. See below right. This can be done with the assistance of another person by:
 - Raise leveler until platform reaches its highest position and lip extends. Continue to maintain this position.
 - Then have assistant insert the smaller end of the Safe-T-Strut™ through the hole in the middle of the leveler lip and place the strut's wider open end over the base located on the leveler's front frame. Align the holes on the base and the Safe-T-Strut™ so that the leveler may be secured with the retaining pin and safety clip.
 - Release the pushbutton on powered levelers allowing the Safe-T-Strut™ to rest on the underside of the lip.
- Lockout/Tagout power supply.
 - Turn off the power to the control box.
 - Lockout/tagout the main power source, as shown under Safety Warnings on the inside front cover of this manual.
 - Always barricade the leveler at dock level and drive level to prevent any unauthorized use of the leveler.

Remove the Safe-T-Strut™.

- For Safe-T-Strut™ removal, have an assistant raise the leveler to its highest position with lip fully extended. Release the safety clip and remove retaining pin. Lift strut off base, and remove from lip. Return the Safe-T-Strut™ to the proper storage position.
- If you are unable to install the Safe-T-Strut™ properly, contact your authorized RITE-HITE® Service Representative or RITE-HITE® Customer Service at 1-414-355-2600.

CAUTION

- Post warnings and barricades at dock level and at drive level to indicate that work is being done around and under the leveler platform.
- Lockout/Tagout power to the leveler and post warnings when work is being performed on the leveler.

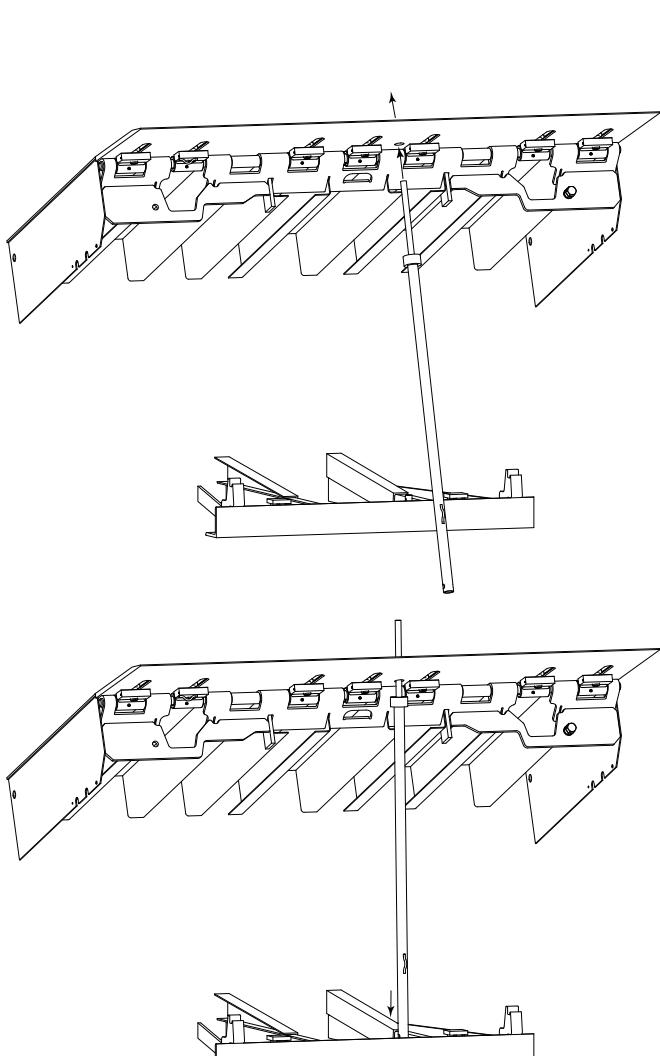

FIGURE 2 - INSTALL SAFE-T-STRUT™

OWNER RESPONSIBILITY

1. The owner should recognize the inherent danger of the interface between dock and transport vehicle. The owner should, therefore, train and instruct operators in the safe use of dock equipment in accordance with the information provided below. The manufacturer shall publish, provide to the initial purchaser, and make the following information readily available to owners:
 - Installation instructions
 - Recommended initial and periodic inspections procedures
 - Maintenance procedures
 - Operating instructions
 - Descriptions or specifications for replaceable or repairable parts
 - Tables identifying the grade (slope) for all variations of length or configuration of the dock equipment, and
 - Information identifying the maximum uncontrolled drop encountered upon sudden removal of support while within the working range of the equipment.

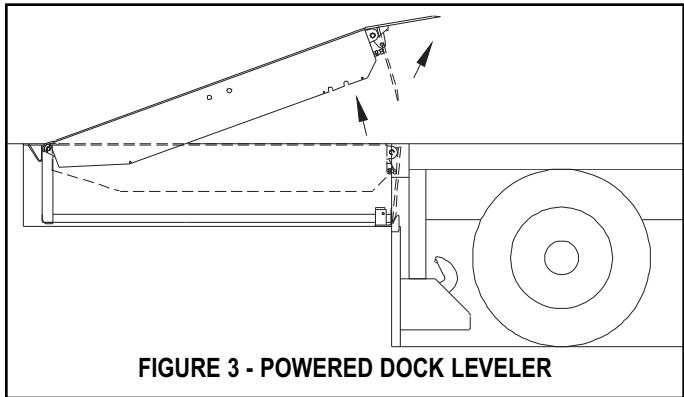

It shall be the responsibility of the owner to verify that the material listed in this section has been received and that it is made available for the instruction and training of personnel entrusted with the use or maintenance of the dock equipment.
2. When a transport vehicle is parked at a loading dock, it is important that the vehicle is relatively perpendicular to the dock face and in close contact with at least one of the dock bumpers.
3. Nameplates, cautions, instructions, and posted warnings shall not be obscured from the view of operating or maintenance personnel for whom such warnings are intended.
4. Manufacturer's recommended periodic maintenance and inspection procedures in effect at date of shipment shall be followed, and written records of the performance of these procedures should be kept.
5. As with any piece of machinery, dock equipment requires routine maintenance, lubrication, and adjustments. Your local RITE-HITE® representative offers owners the option of a Planned Maintenance Program (P.M.P.). As part of this service, your local RITE-HITE® representative will do all routine maintenance, lubrication, and adjustments.
6. Dock equipment that is structurally damaged shall be removed from service, inspected by a manufacturer's authorized representative, and repaired as needed before being placed back in service.
7. The manufacturer shall make available replacement nameplates, caution/instruction labels, and operating / maintenance manuals upon request of the owner. The owner shall see that all nameplates, caution/instruction markings or labels are in place and legible, and that the appropriate operating/maintenance manuals are provided to users.
8. Modifications or alterations of dock equipment shall be made only with written permission of the original manufacturer. These changes shall also satisfy all safety recommendations of the original equipment manufacturer for the particular application of the dock equipment.
9. In order to be entitled to the benefits of the standard product warranty, the dock equipment must have been properly installed, maintained and operated within its rated capacities and/or specific design parameters, and not otherwise abused.
10. It is recommended that trailers equipped with air ride suspensions should remove the air from the suspension to minimize trailer bed drop, prior to loading or unloading.
11. When industrial trucks are driven on and off transport vehicles during the loading and unloading operation, the brakes on the transport vehicle shall be applied and wheel chocks or a positive restraining device shall be engaged.
12. In selecting dock equipment, it is important to consider not only present requirements but also future plans or adverse environments.

OPERATION INSTRUCTIONS POWERED LEVELERS

NORMAL OPERATION

1. Activate the leveler by pushing and holding the RAISE button until leveler is fully raised and lip is fully extended. See figure 3.

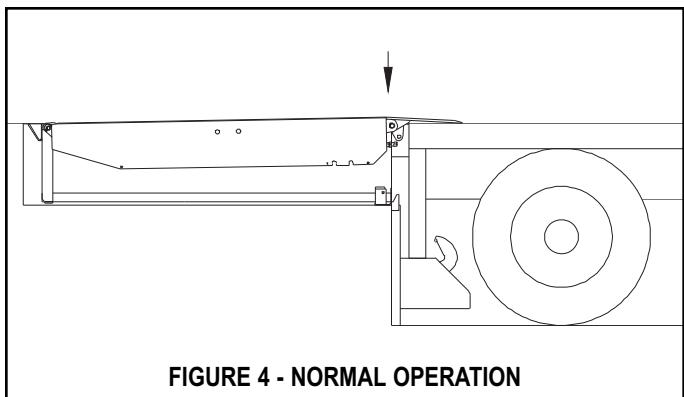

NOTE: Some levelers may be equipped with a two button control box. If so, push and hold the RAISE button to raise the platform. While pressing the RAISE button, push the LIP EXTEND button to fully extend the lip when the lip has cleared trailer bed.

2. When lip is fully extended, release RAISE button. The leveler will automatically lower onto the truck/trailer bed. See figure 4.

NOTES:

- a. Some levelers may be equipped with a two button control box. If so, release RAISE and LIP EXTEND buttons.
- b. Be sure the lip is in full contact with the truck/trailer bed before loading or unloading truck/trailer.

3. See Storing Leveler.

NOTES:

- a. **Levelers without Automatic Return to Dock (ARTD)** If the truck/trailer departs, the leveler will move to its lowest position and the lip will fall to the pendant position inside the dock bumpers. See *Storing Leveler*.
- b. **Levelers with Automatic Return to Dock (ARTD)** If the lip is on the truck/trailer and the truck departs, the leveler will move to its lowest position and the lip will begin to lower. As the lip drops toward the pendant position, the ARTD system automatically returns the leveler to the stored position without operator assistance.

BELLOW DOCK LOADING OPERATION

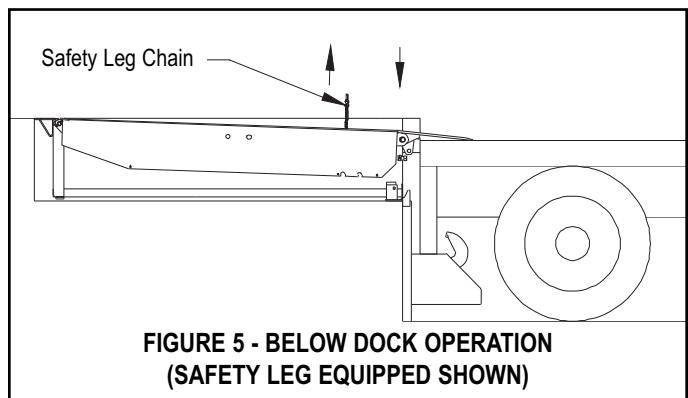

1. Activate the leveler by pushing and holding the RAISE button until leveler is fully raised and lip is fully extended. See figure 3.

NOTE: Some levelers may be equipped with a two button control box. If so, push and hold the RAISE button to raise the platform. While pressing the RAISE button, push the LIP EXTEND button to fully extend the lip when the lip has cleared trailer bed.

2. When lip is fully extended, release RAISE button. If equipped with safety legs, pull and hold the Safety Leg Chain as the leveler lowers automatically onto the truck/trailer bed. See figure 5.

NOTE: Some levelers may be equipped with a two button control box. If so, release RAISE and LIP EXTEND buttons.

3. When loading/unloading is complete, continue with normal operation or return the leveler to stored position. See *Storing Leveler*.

OPERATION INSTRUCTIONS POWERED LEVELERS CONT.

DOCK LEVEL (OR LOWER) END LOADING OPERATION

1. Activate the leveler by pushing and holding the RAISE button until leveler is fully raised and lip begins to extend. See figure 6.

NOTE: Some levelers may be equipped with a two button control box. If so, push and hold the RAISE button until the lip clears the lip supports. While pressing the RAISE button, push the LIP EXTEND button briefly to extend the lip beyond the lip supports.

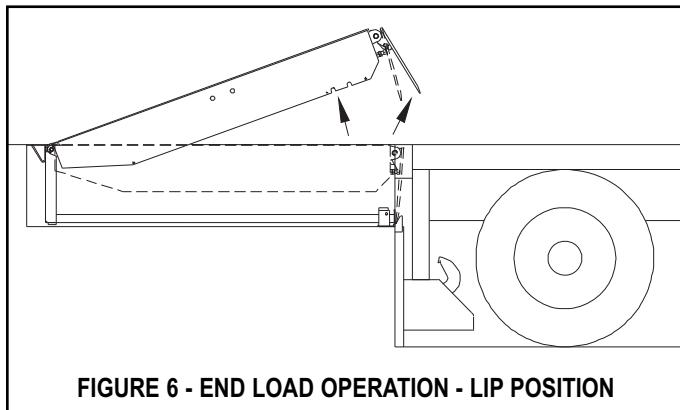

FIGURE 6 - END LOAD OPERATION - LIP POSITION

2. When lip extends about 2 inches, release RAISE button. See figure 6. The leveler will lower to the below dock position with the lip positioned between the face of the loading dock and the truck/trailer bed. See figure 7.

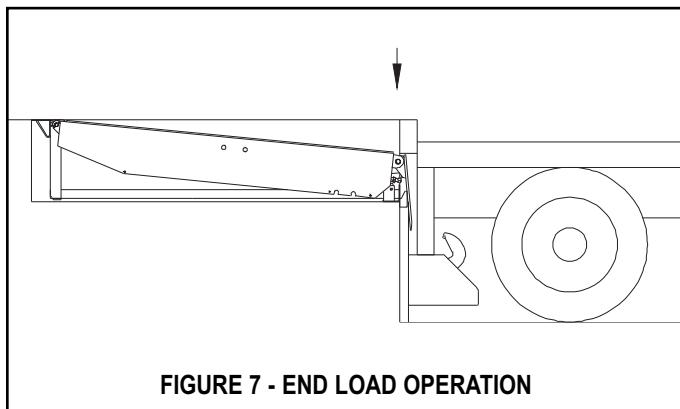

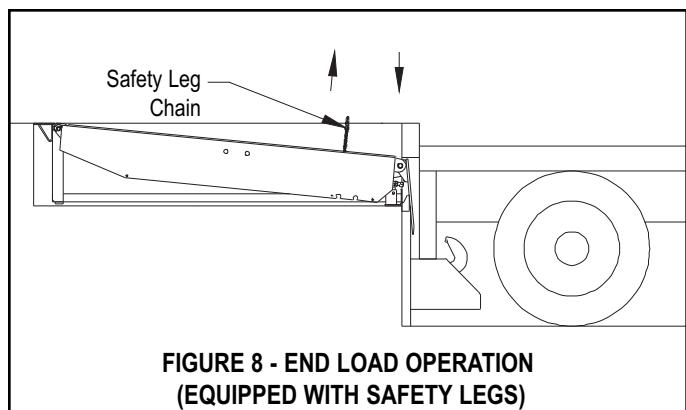

FIGURE 7 - END LOAD OPERATION

NOTES:

- a. Some levelers may be equipped with a two button control box. If so, release RAISE and LIP EXTEND buttons
- b. If equipped, pull and hold the Safety Leg Chain as the leveler lowers for below dock end loads. See figure 8. DO NOT pull chain for dock level end loads.
- c. End load at dock level and above can be handled with the leveler in its stored position on units without a Safe-T-Lip®.
- d. If the lip extended too far, quickly push and release the RAISE button to slightly retract the lip.
- e. If the lip was not extended far enough and hits the lip supports, repeat this step allowing the lip to extend farther.
- 3. When loading/unloading is complete, continue with normal operation or return the leveler to stored position. See *Storing Leveler*.

**FIGURE 8 - END LOAD OPERATION
(EQUIPPED WITH SAFETY LEGS)**

OPERATION INSTRUCTIONS POWERED LEVELERS CONT.

STORING LEVELER

1. To store the leveler, push and hold the RAISE button until leveler is about 6 inches above dock level and lip is fully pendant.
2. Release RAISE button. Leveler will lower to dock level with lip resting in the lip supports. See figure 9.

NOTE: On Powered levelers with Automatic Return to Dock (ARTD). If the lip is on the truck/trailer and the truck departs, the leveler will move to its lowest position and the lip will begin to lower. As the lip drops toward the pendant position, the ARTD system automatically returns the leveler to the stored position without operator assistance.

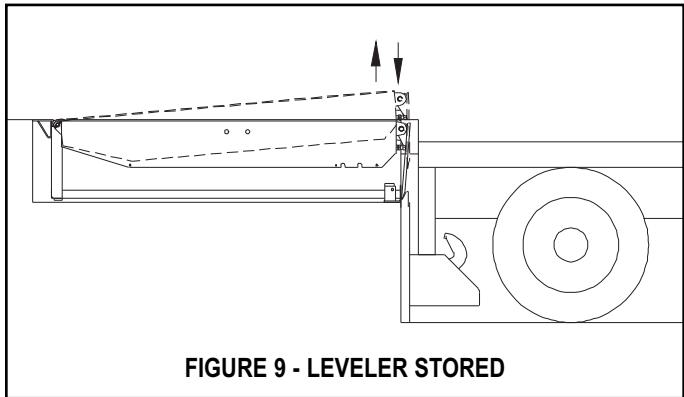

FIGURE 9 - LEVELER STORED

MAINTENANCE PROCEDURES

WARNING

Read and obey these instructions to prevent personal injury.

- Post safety warnings and barricade work area, at dock level and at ground level, to prevent unauthorized use of the dock position before maintenance has been completed.
- Make sure to install the Safe-T-Strut™ before proceeding with any repair work.

SUGGESTED LEVELER MAINTENANCE

NOTE: Follow maintenance procedures below as outlined. Include the specific steps for your leveler model.

NOTE: Your local RITE-HITE® representative provides a Planned Maintenance Program (P.M.P.) which can be fitted to your specific operation. Call your local representative.

Daily

1. Remove debris on and around leveler. Be sure the hinge section of the lip and the platform is clean.
2. Check unit for proper operation.

90 Days

1. Perform all Daily Maintenance.
2. Clean pit.
3. Inspect hydraulic system (cylinders, hoses, fittings, and power unit).
4. Lubricate the leveler with the proper lubricants. See figure 11 or 12.
5. Inspect all weather seals (if installed) and replace if worn or damaged.
6. Inspect dock bumpers. Four inches (4") of bumper protection is required. Worn, torn, loose or missing bumpers must be replaced.
7. Check conditions of concrete, angles and welds. Repair or replace if necessary.
8. Inspect structure, hinge pins, clevis pins and cotter pins for abnormal wear.

9. Inspect all conduit boxes, control boxes and electrical connections for damage. Repair or replace if worn or damaged.

NOTE: If control box has evidence of condensation.

- a. Inspect conduit. Conduit should be routed to enter through the bottom or side of the enclosure. A drip leg may be needed if the conduit is filling with water.
- b. Inspect the seal on the cover of the enclosure. The seal should be securely adhered to the cover with no signs of peeling or bubbling. Repair or replace if worn or damaged.
- c. For non-metallic enclosures, breather vent part number 122130 may be installed. The vent is NEMA 4X and will not change the environmental rating of the control box.

10. With the leveler supported by the Safe-T-Strut, check hydraulic fluid level in tank. Add fluid if necessary. Use only Rite-Hite approved hydraulic fluids.

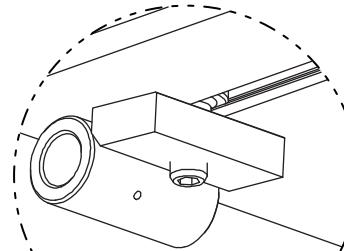

STANDARD: 119181 - Rite-Hite Biodegradeable Fluid (quart/light blue in color)

OPTIONAL: 108303 - Mil 5606 Fluid (quart/red in color)

360 Days

1. Perform Daily and 90-Day Maintenance.
2. Check and tighten control box mounting hardware.
3. Retorque all shoulder bolts on units equipped with Safe-T-Lip®. See figure 10.

Safe-T-Lip® Shoulder Bolt Torque Specifications

- Torque Range: 290 - 310 Ft-Lbs.

FIGURE 10 - SHOULDER BOLT TORQUE

RHH HYDRA-RITE LUBRICATION CHART

On Safe-T-Lip®

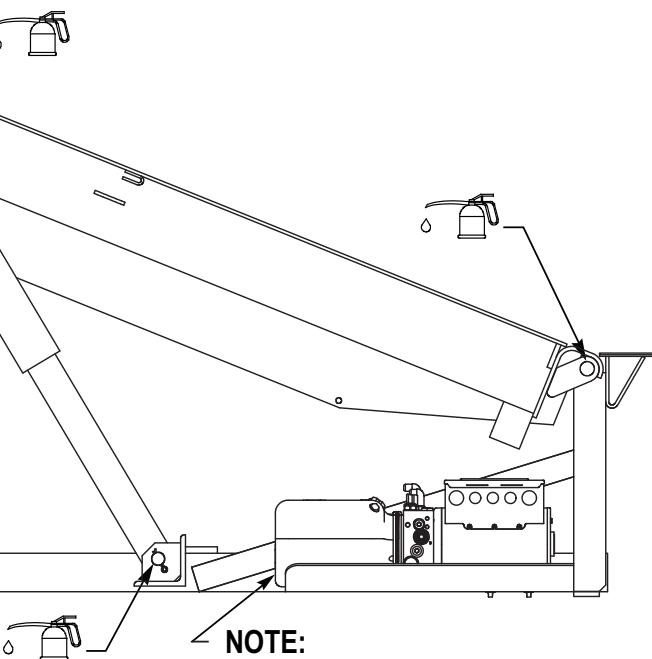

FIGURE 12 - HYDRAULIC LEVELER LUBRICATION (BASE)

DANGER

- DO NOT operate leveler with anyone standing on or in front of the lip.
- NEVER go under the hydraulic leveler platform or lip without installing the Safe-T-Strut™.
- Make sure that the leveler power is locked out and tagged out according to OSHA regulations and approved local codes.

LIP STOP BOLT:

The lip stop bolt adjusts the position of the lip when the leveler is stored to allow the lip to be centered on lip supports when stored.

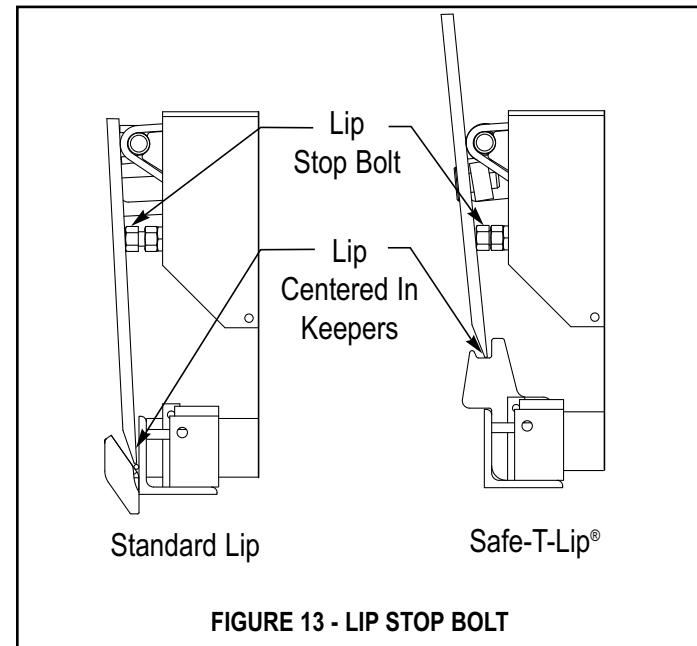

FIGURE 13 - LIP STOP BOLT

HYDRAULIC LEVELER ADJUSTMENTS

HYDRAULIC POWERED LEVELER ADJUSTMENTS

ARTD ADJUSTMENTS:

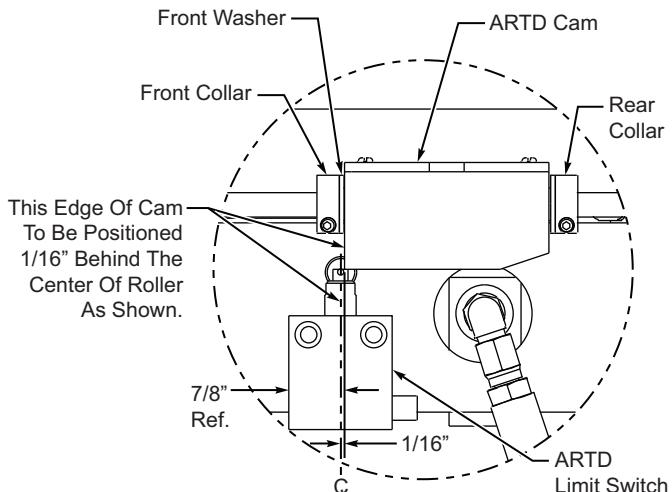

ARTD Limit Switch Cam

NOTE: Before continuing be sure the lip stop bolt is properly adjusted. See page 13.

1. Raise leveler and install a strut securely behind the header or mini-header to allow the lip to hang pendant and rest against the lip stop bolt.
2. Adjust ARTD Cam.
 - a. Adjust collars so the front edge of ARTD cam is $1/16"$ behind the centerline of the ARTD limit switch. See figure 14.
 - b. Tighten front collar while holding the $1/16"$ adjustment.
 - c. Push the rear collar forward as much as possible and tighten. ARTD cam assembly should rotate freely.
3. Run the leveler to test the adjustment. Verify that the lip falls a minimum of 4" before ARTD is initiated. If not, move the cam forward slightly.

NOTE: It is not recommended to position the ARTD cam in front of the ARTD limit switch centerline.

NOTE: There Should Be A Small Amount Of Free Movement Between The ARTD Cam And The Rear Collar When The Rear Collar Is Pushed Against The ARTD Cam.

ARTD Cam Adjustment Detail
(Shown With Lip Pendant And Lip Stop Bolt Adjusted)

FIGURE 14 - ARTD LIMIT SWITCH

WARNING

- Shuttle valve is factory adjusted and sealed.
- Adjustments to be completed by trained technician only.

HYDRAULIC VALVE ADJUSTMENTS (HALDEX POWER UNIT)

SHUTTLE VALVE ADJUSTMENT (Controls Leveler Descent)

NOTE: Check oil level before making any adjustments.

NOTE: Valve Position Illustrated Represents The Nominal Factory Setting Of 3-1/2 Turns Out From The Fully Turned In Position

1. Leveler must be adjusted to lower, from full raised position with lip extended to the header stops the proper time frame. See below

Hydra-Rite™ Less than 20 seconds

Base 8 to 12 seconds

2. Remove protective cap and O-ring. Loosen locknut; without turning valve body or adjustment screw. Turn adjustment screw to vary platform lowering speed. Adjustments should be no more than $1/8$ turn increments.
3. Tighten adjustment screw to decrease platform speed while lowering (excessive loosening can eliminate platform lowering).
4. Loosen adjustment screw to increase platform speed while lowering (velocity fuse may lock-up as a result of increased platform speeds while lowering).
5. Tighten locknut without turning valve body or adjustment screw.
6. Reinstall o-ring and protective cap and tighten cap.
7. Re-test the unit several times to verify the setting.

HYDRAULIC LEVELER ADJUSTMENTS CONT.

SEQUENCE VALVE ADJUSTMENT

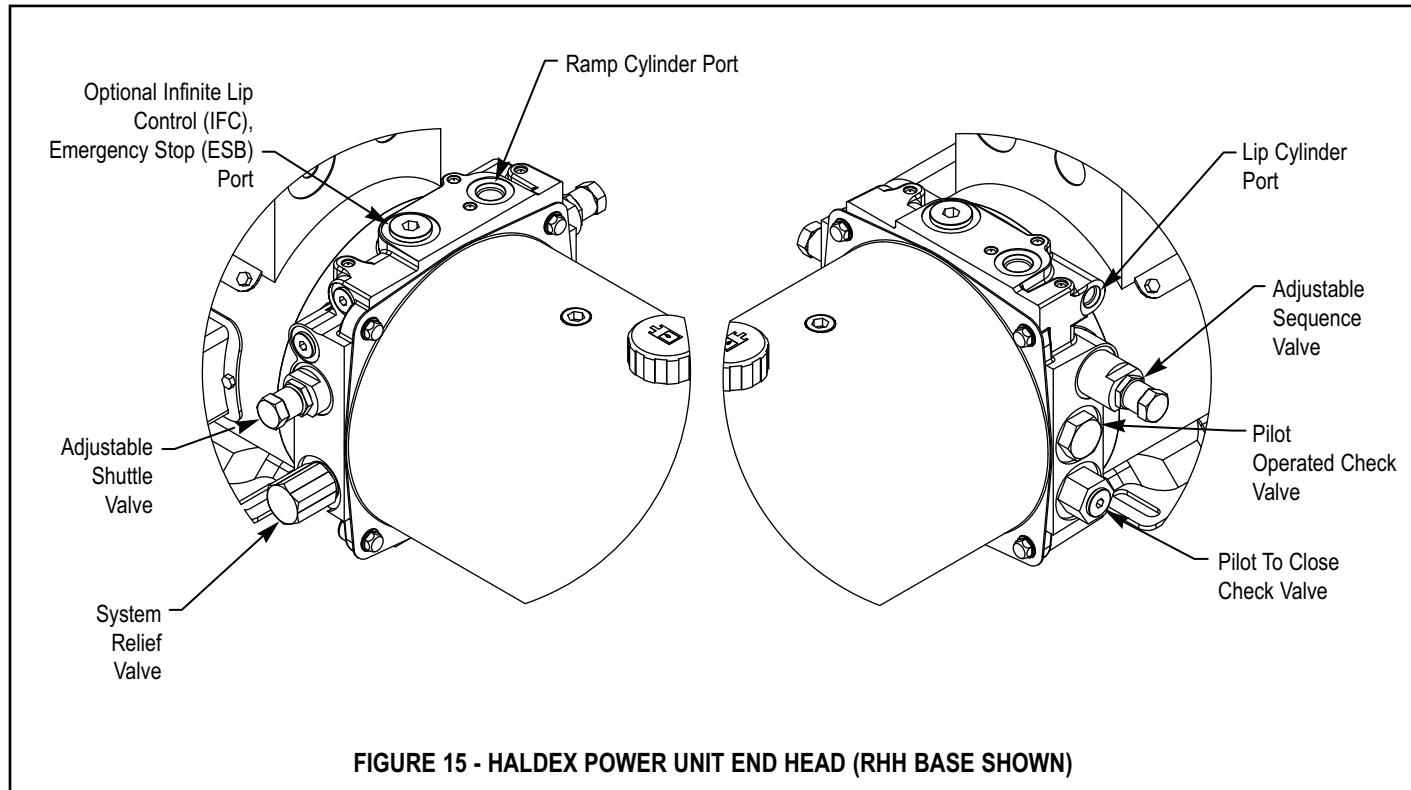

(Controls Lip Extension)

NOTE: Check oil level before making any adjustments.

1. When the leveler is fully raised and the lip does not extend, the Sequence Valve is set too high.
2. Remove protective cap and O-ring. Loosen locknut without turning valve body or adjustment screw. Turn adjustment screw counterclockwise to lower the valve pressure setting. See Figure 15.
3. Adjustments should be no more than 1/8 turn increments.
4. Tighten locknut without turning valve body or adjustment screw.
5. Reinstall O-ring and protective cap and tighten cap.
6. Re-test the unit several times to verify the setting.

7. If the lip begins to extend at any time before the platform has fully raised, the Sequence Valve setting is too low.
8. Remove protective cap and O-ring. Loosen locknut without turning valve body or adjustment screw. Turn adjustment screw clockwise to increase the valve pressure setting.
9. Adjustments should be no more than 1/8 turn increments.
10. Tighten locknut without turning valve body or adjustment screw.
11. Reinstall O-ring and protective cap and tighten cap.
12. Re-test the unit several times to verify the setting.

NOTE: Sequence valve is factory sealed. Adjustments to be completed by trained technician only.

HYDRAULIC LEVELER ADJUSTMENTS CONT.

ARTD ADJUSTMENTS:

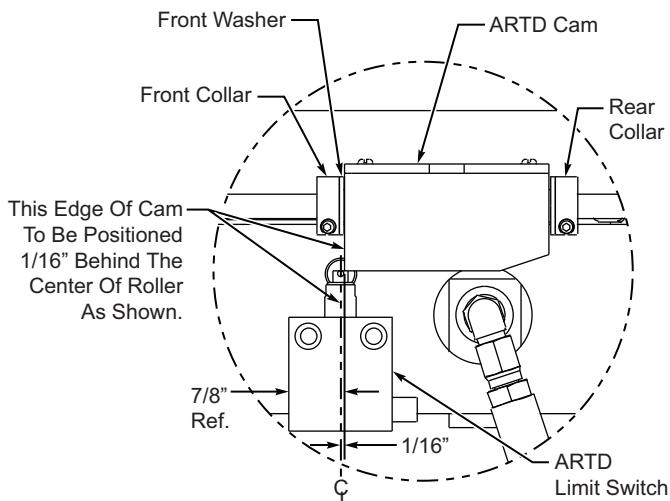

ARTD Limit Switch Cam

NOTE: Before continuing be sure the lip stop bolt is properly adjusted. See page 13.

1. Raise leveler and install a strut securely behind the header or mini-header to allow the lip to hang pendant and rest against the lip stop bolt.
2. Adjust ARTD Cam.
 - a. Adjust collars so the front edge of ARTD cam is $1/16"$ behind the centerline of the ARTD limit switch. See figure 16.
 - b. Tighten front collar while holding the $1/16"$ adjustment.
 - c. Push the rear collar forward as much as possible and tighten. ARTD cam assembly should rotate freely.
3. Run the leveler to test the adjustment. Verify that the lip falls a minimum of 4" before ARTD is initiated. If not, move the cam forward slightly.

NOTE: It is not recommended to position the ARTD cam in front of the ARTD limit switch centerline.

NOTE: There Should Be A Small Amount Of Free Movement Between The ARTD Cam And The Rear Collar When The Rear Collar Is Pushed Against The ARTD Cam.

ARTD Cam Adjustment Detail
(Shown With Lip Pendant And Lip Stop Bolt Adjusted)

FIGURE 16 - ARTD LIMIT SWITCH

WARNING

- Flow Control valve is factory adjusted.
- Adjustments to be completed by trained technician only.

HYDRAULIC VALVE ADJUSTMENTS (BUCHER POWER UNIT)

FLOW CONTROL VALVE ADJUSTMENT (Controls Leveler Descent)

NOTE: Check oil level before making any adjustments.

1. Leveler must be adjusted to lower, from full raised position with lip extended to the header stops in the proper time frame. See below

Hydra-Rite™	Less than 20 seconds
Base	8 to 12 seconds
2. Press RAISE button and run the platform up until the lip extends.
3. Release RAISE button and allow the platform to fall completely below dock and stop. Verify with a stop watch that the platform falls according to the times in step 1. If not, readjust flow control valve.
4. Set flow control valve (first loosen locknut on valve). See Figure 17.
 - To fall slower - Turn in (clockwise) in $1/4$ turn increments.
 - To fall faster - Turn out (counter-clockwise) in $1/4$ turn increments.

Or set valve at starting point (3-1/2 turns clockwise from fully out).
5. Repeat procedure to verify fall time as needed to fall according to step 1. $1/8$ turns might be necessary to fine tune the adjustment.
6. Tighten locknut on flow control valve.

HYDRAULIC LEVELER ADJUSTMENTS CONT.

SEQUENCE VALVE ADJUSTMENT

(Controls Lip Extension)

NOTE: Check oil level before making any adjustments.

NOTE: Sequence valve is factory set. Adjustments to be completed by trained technician only.

1. When the leveler is fully raised and the lip does not extend, the Sequence Valve is set too high.
2. Loosen adjustment nut.
3. Turn adjustment screw in completely (clockwise) with an allen wrench. See Figure 17.
4. Back screw out to get to factory starting point:
For power units built before April 2015: 2-1/2 turns.
For power units built after March 2015: 5-1/2 turns.
5. Press RAISE button and run the platform up until the lip extends.

6. Verify that the lip extends only at the top of the ramp cylinder stroke. If not, continue with Sequence Valve adjustment.
 - Turn adjustment screw out (counter-clockwise) in 1/8 turn increments. Lip will extend more quickly.
 - Turn adjustment screw in (clockwise) in 1/8 turn increments. Lip will extend more slowly.
7. Release RAISE button and allow the platform to fall completely below dock and stop.
8. Verify that the lip will fall to pendant as the platform is raised up to store the lip in the keepers. If lip re-extends, turn adjustment screw in (clockwise) in 1/8 turns and retest.
9. Re-test the unit several times to verify the setting.

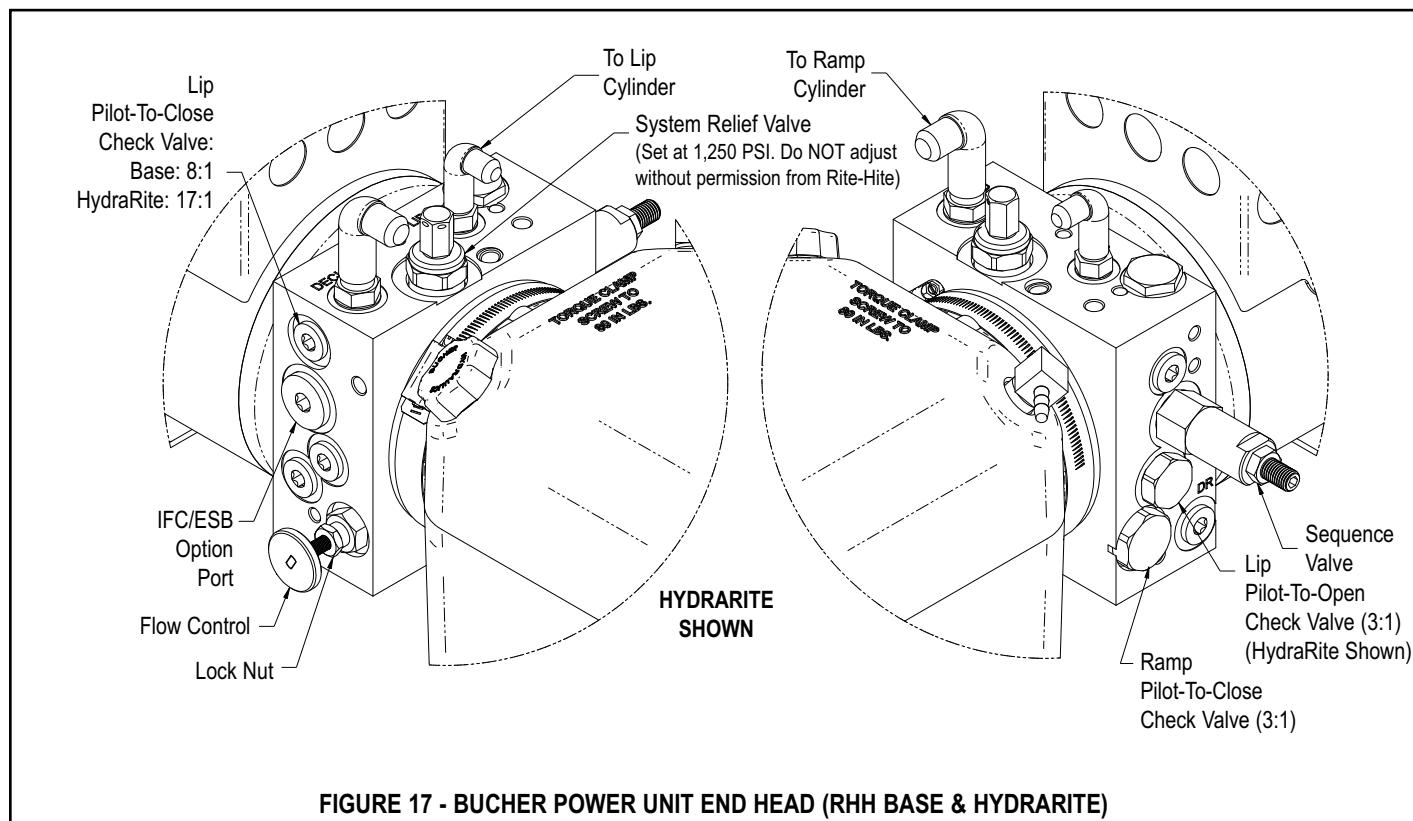

FIGURE 17 - BUCHER POWER UNIT END HEAD (RHH BASE & HYDRARITE)

HYDRAULIC POWERED LEVELER TROUBLESHOOTING

Problem	Probable Cause	Solution
1. Platform does not raise	a. Power has been disconnected. b. The motor has been miswired. c. Overload tripped. d. Debris is lodged on or around the leveler. e. Hydraulic fluid level is low.	a. Verify that power has not been disconnected. Verify that disconnect circuit breaker or fuses are not tripped. b. Verify that the motor has been wired according to the motor wiring diagram. c. Push RESET on overload relay. d. Check for and remove any lodged materials on or around the leveler. e. Check oil level when the unit is held open with the maint. support. Refill if necessary.
2. Leveler runs continuously.	a. The pushbutton, contact block or motor contactor damaged.	a. Repair or replace components.
3. Lip extends slowly and/or does not extend.	a. Debris on lip hinge. b. Lip impacted or bent. c. Hydraulic fluid level low.	a. Remove debris from the lip hinge. b. Lubricate per maintenance procedures or replace lip. c. Check oil level when unit is held open with the maint. support. Refill if necessary.
4. Platform does not lower.	a. Velocity fuse has locked up. b. Debris is lodged on or around the leveler.	a. Attempt to raise the unit to unlock the velocity fuse. b. Check and remove any lodged debris on or around leveler.
5. Platform raises very slowly.	a. Weight on top of platform. b. Hydraulic fluid level is low. c. Low voltage d. Power unit/pump/motor failure.	a. Remove weight from platform. b. Check oil level when the unit is held open with the maint. support. Refill if necessary. c. Verify $\pm 10\%$ nominal voltage while unit is running. d. Replace power unit assembly.
6. Lip does not store properly.	a. The lip stop bolt is not adjusted properly. b. Debris. c. Lip supports.	a. Verify that the lip stop bolt is properly adjusted. b. Remove debris. c. Repair or replace the lip supports.
7. Fuse or circuit breaker trips.	a. Undersized fuse or circuit breaker. b. Low voltage. c. Short circuit in wiring. d. Wire gage is too small. Distance is too long.	a. Verify 20 amp for 120VAC and 15 amp for 240VAC. b. Verify $\pm 10\%$ nominal voltage while unit is running. c. Check wiring connections and verify. d. Verify minimum wire gage per distance is correct. See chart on page 22.

RITE-HITE® STANDARD WARRANTY

RITE-HITE® warrants that its products will be free from defects in design, materials, and workmanship for a period of 365 days from the date of shipment. All claims for breach of this warranty must be made within 30 days after the defect is or can, with reasonable care, be detected and in no event no more than 30 days after the warranty has expired. In order to be entitled to the benefits of this warranty, the products must have been properly installed, maintained, and operated within their rated capacities and/or specified design parameters, and not otherwise abused. Periodic lubrication and adjustment is the sole responsibility of the owner. This warranty is RITE-HITE's® exclusive warranty. RITE-HITE® EXPRESSLY DISCLAIMS ALL IMPLIED WARRANTIES, INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS. Non-standard warranties, if any, must be specified by RITE-HITE® in writing.

In the event of any defects covered by this warranty, RITE-HITE® will remedy such defects by repairing or replacing any defective equipment or parts, bearing all the costs for parts, labor, and transportation. This shall be the exclusive remedy for all claims whether based on contract, negligence, or strict liability.

LIMITATION OF LIABILITY

RITE-HITE® SHALL NOT IN ANY EVENT BE LIABLE FOR ANY LOSS OF USE OF ANY EQUIPMENT OR INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY KIND, WHETHER FOR BREACH OF WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.
